## Publications

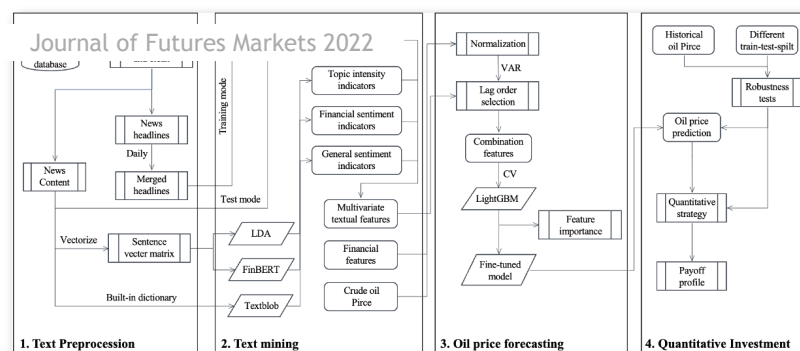

### Published Papers

#### [The role of textual analysis in oil futures price forecasting based on machine learning approach](#)

Gong, X., Guan, K.\*, Chen, Q. (2022).

#### [Project](#)

- This work is published on Journal of Futures Markets (ABS-3 star).
- We creatively introduce text mining techniques (LDA, CNN, FinBERT, TextBlob) to forecast oil futures price.
- We offer an innovative approach to capture the trend of oil futures prices based on natural language processing and machine learning.
- **Conclusion:** The textual features and financial features are complementary in improving forecasting performance, and the improvement can be maximized by incorporating all features.

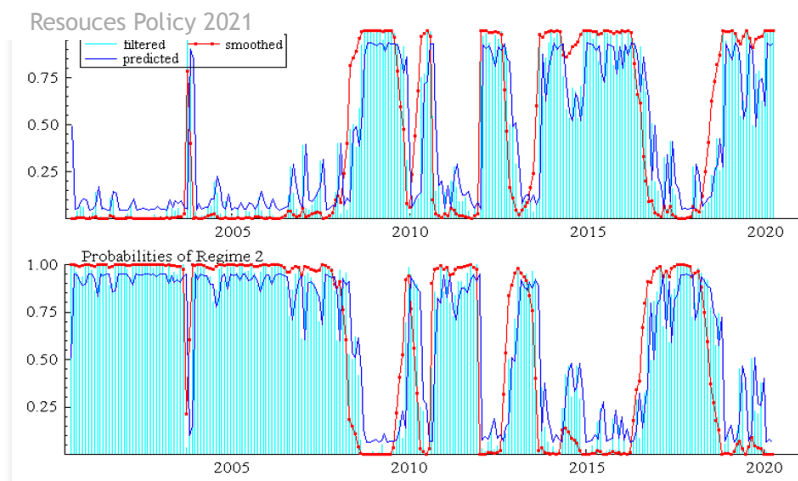

#### [What drives oil prices?—A Markov switching VAR approach.](#)

Gong, X., Guan, K., Chen, L., Liu, T. \*, & Fu, C. (2021)

#### [Project](#)

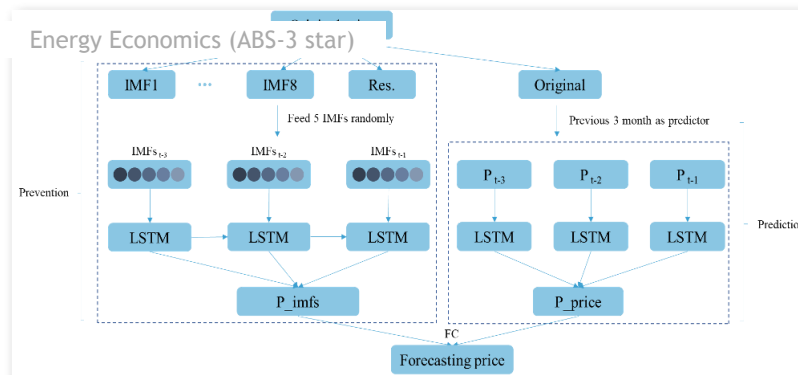

- This work is published on Resources Policy (ABS 2-star)
- We construct a five-variable Markov switching vector auto-regressions model based on five driving factors.
- We build this model to study the impact of different oil shocks on oil prices and analyze the factors under different regime conditions.
- **Conclusion:** The oil inventory and speculative demand have more significant effects on the oil price fluctuation than the oil aggregate supply and demand, and multiple factors have cumulative effects on the oil price fluctuation and the their intensity change under different regimes.

## Working Papers

### [A new hybrid deep learning model for oil prices forecasting](#)

Gong, X., Guan, K.\*

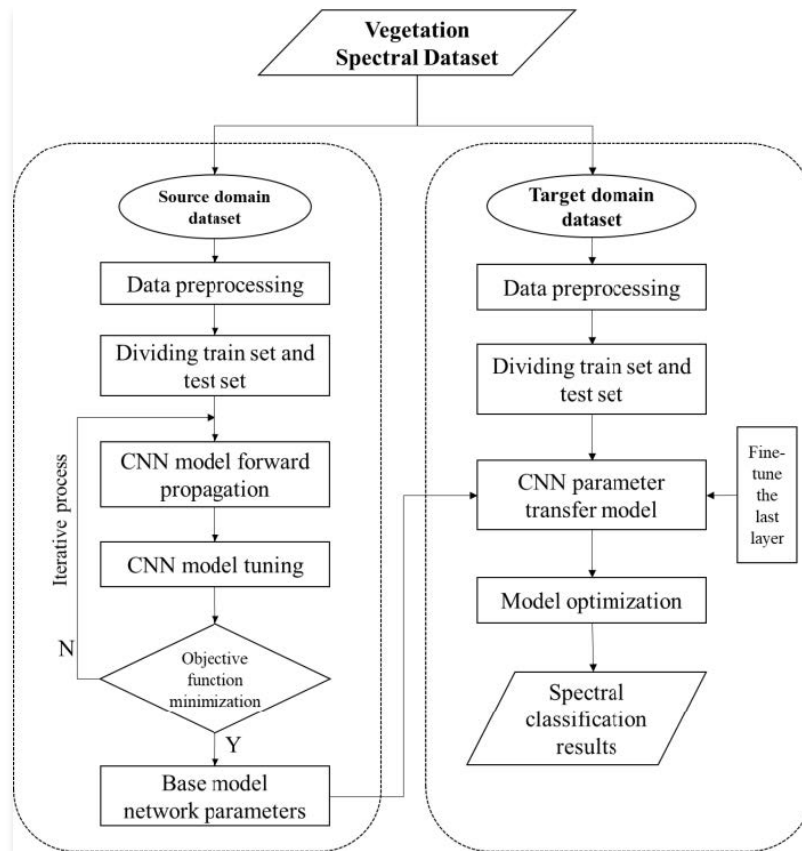

[Classification of small sample vegetation based on hyperspectral remote sensing and transfer learning]

Huang, W., Guan, K.\*, Hu, Y.

- This working paper is under review at Remote Sensing of Environment (SCIE-Q1).
- We provide a framework to efficiently perform hyperspectral classification of small samples of vegetation, which reduces model overfitting and diminishes category imbalance interference.
- We adopt transfer learning to alleviate spectral data shortage and innovatively consider cross-domain learning of spectra.
